Staff Identification and Positioning System for Waterworks Factory

Mar 2017 - Nov 2017

C++, MATLAB, Faster R-CNN, OpenCV, SVM

- Participated in building an auto surveillance system detecting invaders and locating position of employees for a waterworks, using gait recognition technology and streaming videos from cameras mounted across the area.
- Conducted the project based on Faster R-CNN, Canny, SIFT, Background Subtraction, Optical Flow, SVM, Procrustes, Gaits Energy Images, Fan-Beam, etc. Analyzed data and deployed the system with C++.

Stock Prediction System Based on Hidden Markov Model

Sept 2016 - Mar 2017

Python, MySQL

- Participated in building a Chinese stocks prediction system based on Hidden Markov Model and implemented it as a WeChat Mini Program to provide users with stock history and short-term / long-term predictions.
- Constructed a prediction system calculating trends of given stocks in 5/10/20 days using mass stock-relevant data crawled by Tushare, analyzed data with Pandas for Python and predict with HMM model (hmmlearn) for Python.
